

STAMFORD®

S7L1D-D4 & S7L1W-D4 (Industrial) Wdg.312 - Technical Data Sheet

Standards

STAMFORD industrial alternators meet the requirements of the relevant parts of the IEC 60034 and the relevant sections of other international standards such as BS5000-3, ISO 8528-3, VDE 0530, NEMA MG1-32, CSA C22.2-100 and AS 60034. Other standards and certifications can be considered on request.

Quality Assurance

Alternators are manufactured using production procedures having a quality assurance level to BS EN ISO 9001.

*Image depicts the S7L1D alternator

Excitation and Voltage Regulators

| Excitation System | | | | | |
|--------------------|-------|--------|---------|--|--------------------------|
| AVR Type | MX341 | MX322 | DECS150 | | |
| Voltage Regulation | ± 1% | ± 0.5% | ± 0.25% | | with 4% Engine Governing |
| AVR Power | PMG | PMG | PMG | | |

| | |
|----------------------------------|-------------|
| No Load Excitation Voltage (V) | 15.6 - 14.8 |
| No Load Excitation Current (A) | 0.7 - 0.67 |
| Full Load Excitation Voltage (V) | 63 |
| Full Load Excitation Current (A) | 2.7 |
| Exciter Time Constant (seconds) | 0.125 |

THREE PHASE EFFICIENCY CURVES

50Hz

60Hz

STAMFORD

S7L1D-D4 & S7L1W-D4 (Industrial) Wdg.312

Locked Rotor Motor Starting Curves - Separately Excited

50Hz

60Hz

| Transient Voltage Dip Scaling Factor | | Transient Voltage Rise Scaling Factor | |
|--------------------------------------|----------------|---------------------------------------|----------------|
| Lagging PF | Scaling Factor | Lagging PF | Scaling Factor |
| <= 0.4 | 1.00 | <= 0.4 | 1.25 |
| 0.5 | 0.95 | 0.5 | 1.20 |
| 0.6 | 0.90 | 0.6 | 1.15 |
| 0.7 | 0.86 | 0.7 | 1.10 |
| 0.8 | 0.83 | > 0.7 | 1.00 |
| 0.9 | 0.75 | | |
| 0.95 | 0.70 | | |
| 1 | 0.65 | | |

Note: To determine % Transient Voltage Dip or Voltage Rise at various PF, multiply the % Voltage Dip from the curve directly by the Scaling Factor.

STAMFORD®

S7L1D-D4 & S7L1W-D4 (Industrial) Wdg.312

Three-phase Short Circuit Decrement Curve - Separately Excited

50Hz

Sustained Short Circuit = 5751 Amps

60Hz

Sustained Short Circuit = 6665 Amps

Note 1

The following multiplication factors should be used to adjust the values from curve between time 0.001 seconds and the minimum current point in respect of nominal operating voltage :

| 50Hz | | 60Hz | |
|---------|--------|---------|--------|
| Voltage | Factor | Voltage | Factor |
| 380V | X 1.00 | 416V | X 1.00 |
| 400V | X 1.05 | 440V | X 1.06 |
| 415V | X 1.09 | 460V | X 1.10 |
| 440V | X 1.16 | 480V | X 1.15 |

The sustained current value is constant irrespective of voltage level

If MX322 or digital AVR is used, the sustained short-circuit current value is to be multiplied by a factor of 1.2.

Note 2

The following multiplication factor should be used to convert the values calculated in accordance with NOTE 1 to those applicable to the various types of short circuit :

| | 3-phase | 2-phase L-L | 1-phase L-N |
|-------------------------|---------|-------------|-------------|
| Instantaneous | x 1.00 | x 0.87 | x 1.30 |
| Minimum | x 1.00 | x 1.80 | x 3.20 |
| Sustained | x 1.00 | x 1.50 | x 2.50 |
| Max. sustained duration | 10 sec. | 5 sec. | 2 sec. |

Note 3

All other times are unchanged

Curves are drawn for Star connections under no-load excitation at rated speeds. For other connection (where applicable) the following multipliers should be applied to current values as shown :

Parallel Star = Curve current value X 2

Series Delta = Curve current value X 1.732

Note:

For S7L1W industrial application, ratings above are applicable for water inlet temperature up to 25°C. Ratings are subject to the following reduction:
 - 3% for every 5°C by which the water inlet temperature exceeds 25°C, up to maximum 38°C
 Standby (163/27°C) ratings are not applicable for S7L1W.

De-rates

All values tabulated above are subject to the following reductions:

- 5% when air inlet filters are fitted
- 3% for every 500 meters by which the operating altitude exceeds 1000 meters above mean sea level
- 3% for every 5°C by which the operational ambient temperature exceeds 40°C @ Class H temperature rise (not applicable to S7L1W)
- For marine alternators (IP23), 3% for every 5°C by which the operational ambient temperature exceeds 50°C
- For any other operating conditions impacting the cooling circuit please refer to applications

Note: Requirement for operating in an ambient exceeding 60°C and altitude exceeding 4000 meters (for <690V) or 1500 meters (for >690V) must be referred to applications.

Dimensional and Torsional Drawing

For dimensional and torsional information please refer to the alternator General Arrangement and rotor drawings available on our website (<http://stamford-avk.com/>)

Note: Continuous development of our products means that the information contained in our data sheets can change without notice, and specifications should always be confirmed with Cummins Generator Technologies prior to purchase.
